

SAY GOODBYE TO DOVETAIL ANCHORING SYSTEMS!

Introducing the the new Winged Wire Tie Anchor.
The WWTA™ costs less, installs faster, and performs better than
Dovetail Anchoring Systems! **Simply put...THE BETTER WAY!**

The WWTA™ is a breakthrough in masonry veneer anchoring systems. The simplicity in the design makes it cost efficient, seemingly effortless to install, and an overall superior alternative to traditional dovetail anchoring systems.

WWTA™ ADVANTAGES!

LESS EXPENSIVE

- WWTA™ material costs are as much as 85% less expensive than Dovetail Anchoring Systems!
- The Dovetail Slot when installed leaves 16" to 24" of un-utilized channel, which is wasteful and costly.

System

EASIER INSTALLATION

- The WWTA™ anchor can be installed in a matter of seconds, placed directly on the finished concrete wall. It can be easily added, removed, or adjusted as necessary resulting in significant savings in time and labor costs.
- Installation for Dovetail Slot is labor intensive. There is no room for adjustment, once the concrete is poured into the form.

BETTER PERFORMANCE

- WWTA™ allows adequate vertical adjustability using the Pintle Wire Tie legs rather than wasting 24" of channel per anchor.
- WWTA™ accepts the Pintle Wire Tie directly without added Dove Tail Plate, making the tie less costly, reducing free play in the connection, and preventing occasional buckling of the tie
